## Use case

Deploy a basic Lambda function via script, and trigger using S3 or EventBridge
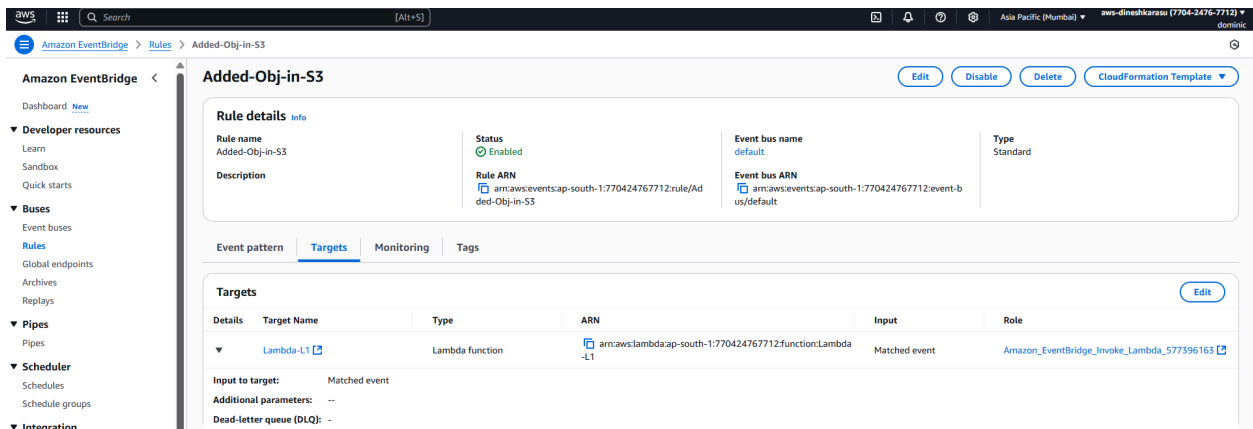

1. Create an S3 bucket

2. Create two lambda functions Lambda-L1 and Lambda-L2

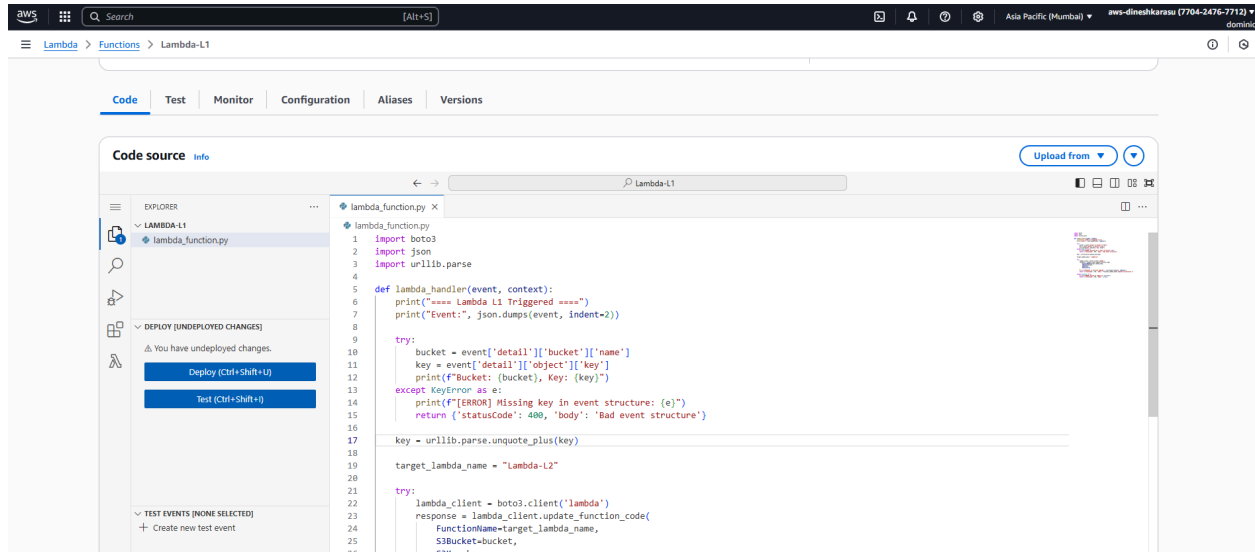

3. Create a new Event bridge rule with S3:ObjectCreated as source, detail type targetting Lambda-L1 function

4. Write the following code in Lambda-L1 which does the following things

   ● Extract file from bucket
   ● Dumps that code into Lambda-L2 function

5. Add a Zip file in the S3 container which contains the code to be deployed in Lambda L2

6. Lambda-L1 will trigger automatically any new code will be poopulated in Lambda-L2 function. Verify
